SoniQ Website — End-to-End Blueprint

Complete sitemap, page content, navigation logic, and design system

Built from the SoniQ Investor Deck, Product Deck (21 screens / 6 modules), and structural patterns benchmarked against Hubstaff & Teramind

---

PART 0 — Brand System Extracted From Your Own Decks

Before designing pages, here's what your existing decks already establish as SoniQ's visual identity — this is the foundation everything below is built on, so the new website looks like *it belongs to the same product* as your decks and dashboard mockups.

Colors (as used in your deck)

Role	Color	Where it appears in your deck
Hero/dark background	Near-black navy (`#0A0E12`-ish)	Cover slides, closing slide
Brand gradient accent	Green → Yellow vertical gradient	Left edge strip on dark slides
Primary accent (CTA/tags)	Hot pink/magenta (`#E6007A`-ish)	"Problem" tag pills, CTA circles, headline bold-words
Secondary accent	Gold/amber yellow (`#F5A623`-ish)	Dashboard active-tab highlights, bar charts, badges
Tertiary accent	Green (`#3DBA6E`-ish)	"productive" states, engine icons, positive metrics
Quaternary accent	Blue (`#2E7CD6`-ish)	Background gradients on light slides, info icons
Content slide background	Warm gradient: pale yellow → pale blue	All "Problem/Market/Solution" slides
Product UI background	Off-white / light grey (`#F7F7F5`-ish)	Every dashboard screenshot
Product UI dark elements	Near-black (`#1A1A1A`) sidebar pills, active nav state	Nav bar "Dashboard/Teams/Screenshots..." active tab

Role	Color	Where it appears in your deck
Body text	Dark charcoal navy, not pure black	All slide body copy

Signature brand bar: a 4-color horizontal strip (pink / yellow / green / blue) appears at the bottom of every content slide — this is a strong, ownable brand device worth carrying onto the website (e.g., as a footer top-border, a loading bar, or a section divider).

Signature 3D icon: a metallic white/purple-blue shield-with-checkmark, floating on a ring pedestal with orbiting spheres, used on all title/cover slides. This is your hero visual motif — worth animating (slow rotation, orbiting spheres in motion) as a real 3D/Lottie/CSS animation on the homepage hero.

Typography (as used in your deck)

- Headlines: bold, rounded-geometric sans-serif (visually consistent with your memory note of **Space Grotesk** for headings)
- Body: clean grotesque sans (consistent with **Inter**) — matches your existing "Space Grotesk/Inter font system" decision
- Bold inline words within headlines are highlighted in the accent color (pink) rather than just bolded black — e.g. *"Building a **Workforce Intelligence Platform** that monitors..."* — this pattern should carry into all website headlines.

Product UI patterns (from your 21-screen product deck — reuse these directly as the "product tour" visuals on the site)

- Top nav inside the product: `Soniq | Dashboard Teams Screenshots Attendance Reports Settings | Setting🔔👤` — pill-shaped active-state tab
- Card-based dashboard: rounded-corner white cards on light grey canvas, each with a label, a big number, and a small trend indicator
- Circular progress ring for "Org Productivity Score" (78/100 style)
- Status color-coding: green = productive, grey = neutral/idle, black = unproductive/offline, amber = privacy mode, red = absent/late
- Screenshot gallery with blur/privacy toggle per employee — a genuine trust/privacy feature worth foregrounding on the website, not hiding
- "Auto-Generated Insights" cards at the bottom of every report — plain-language callouts (e.g., "Friday Productivity Drop") — this is a strong AI-differentiator to spotlight prominently on the homepage and product pages.

About → /about
Contact / Book a Demo → /contact
[Start Free Trial]  [Book a Demo]   ← standalone top-right CTAs
[Sign in]                           ← utility link
```

Design rationale: this mirrors Hubstaff's hub-and-spoke depth (Product mega-menu → individual feature pages, each with its own hero + CTA) while borrowing Teramind's "Why us / comparison" as a first-class nav item rather than buried in footer — useful since SoniQ is entering a market with established incumbents you're directly positioned against.

PART 2 — Homepage, Section by Section

2.1 — Hero Section

Background: near-black navy, green→yellow gradient strip along the left edge (exactly as in your deck cover), subtle dot/grid pattern across the dark space.

Headline (bold word in pink):

> Building a **Workforce Intelligence Platform** that monitors, measures & maximizes productivity

Sub-line (rotates every few seconds through your two deck taglines):

> "Every App. Every Minute. Total Workforce Visibility." / "See Everything. Lead Smarter."

Visual: your existing 3D shield-checkmark icon, rendered as a real animated 3D object — slow continuous rotation, the two orbiting spheres drifting on independent elliptical paths (this is directly achievable in Three.js/Spline and matches what's already in your brand deck).

CTAs: `Start Free Trial` (solid pink button) + `Book a Demo` (outlined white button) — no-credit-card reassurance text beneath, same pattern as Hubstaff.

Tab strip above/below hero (Hubstaff pattern, adapted to your 6 product modules): `Dashboard | Teams | Screenshots | Attendance | Reports | Settings` Clicking each tab swaps a live product screenshot beside the hero — you already have all 6 screenshots ready-made from the product deck, so this is a drop-in implementation, not new design work.

2.2 — "The Problem" Section

Background: warm pale-yellow→pale-blue gradient (matches your deck's Problem slides exactly). **Pink "Problem" tag pill** + headline:

> Existing tools can't deliver real workforce intelligence

3-column breakdown (from your deck):

Legacy approaches depend on	And they fall short because
Fragmented task management & manual reporting	Productivity is measured after the fact
Retrospective KPI audits and HR assessments	No visibility into employee work activity
—	Employee behavior cannot be tracked, predicted, or optimized in real time

Supporting visual: the "frustrated manager" illustration circle with 4 icon bubbles (reports, social/chat, messaging, org-chart), exactly as in your deck — reused directly as a website illustration.

2.3 — "Two Engines" / How It Works

Headline: **Soniq operates on two powerful engines** Two large circular nodes (as in your deck):

1. **Real-Time Work Intelligence** — Track every app, website, work session and on-screen activity as it happens
2. **Workforce Performance Analytics** — Turn raw activity data into productivity scores, attendance patterns and actionable reports

2.4 — Product Tour (the core of the homepage — your strongest asset)

Six-part scrolling showcase, one full-width section per module, alternating text-left/image-right and image-left/text-right (Hubstaff's alternating pattern), each using your **actual dashboard screenshots**:

1. **Dashboard Overview** — "See your entire org's pulse in one glance." → Org Productivity Score ring, Work Summary chart, Live Activity feed, Attendance snapshot.
2. **Teams & Attendance** — "Manage every team without micromanaging any one person." → Team cards with productivity scores, Work Hours Calendar heatmap, Gantt-style attendance timeline.
3. **Screenshot Intelligence** — "Verify work, not watch people." → Gallery view with productive/neutral/unproductive tagging, per-employee blur toggle prominently shown (this is your trust differentiator — feature it, don't hide it).
4. **Intelligence Reports** — "Six reports. Zero guesswork." → Work Pulse heatmap, Burnout & Wellbeing index, Focus Score, Tool Intelligence (with underused-license $ savings callouts), Attendance, Team Leaderboard.
5. **Settings & Controls** — "Total configurability, org-wide or per-person." → the categorized settings screen (Org & People / Work & Monitoring / Access & Controls), with the "Legal gate" consent screen for Silent Tracking shown as evidence of responsible-by-design monitoring.
6. **Auto-Generated Insights** — a dedicated callout section for the plain-language insight cards ("Friday Productivity Drop," "Engineering sprint sessions up 22%") — this is your clearest AI-differentiation moment versus Hubstaff (no AI insights) and a softer framing than Teramind's threat-language AI.

2.5 — Trust & Responsible Monitoring Block

Directly addressing the "monitors, measures, maximizes" positioning with reassurance — borrowing Hubstaff's autonomy-language discipline:

- Per-employee privacy/blur controls (real feature, shown in your Screenshots module)
- Legal-consent gate before any silent/invisible tracking can be enabled (real feature, shown in your Settings module) — this is a genuinely strong trust signal most competitors don't surface this transparently; make it a headline trust point, not a buried settings toggle.
- Role-based permissions matrix

2.6 — Outcomes / Impact Section

Stat cards (from your deck, reframed as customer-facing outcomes rather than investor

projections):

- **+45 minutes** gained per employee per day
- **20–30%** of wasted payroll hours recovered
- Real-time visibility replacing retrospective, after-the-fact reporting

(Note: I've deliberately excluded your TAM/SAM/SOM figures, the ₹1 Cr raise, and team bios from this — those are investor-deck content, not customer-facing website content, per your instruction.)

2.7 — Built for Indian SMBs & Mid-Market

Short section acknowledging your actual target segment — "enterprise-grade workforce intelligence without enterprise complexity" — with simple iconography (not a triangle diagram, that's investor-deck framing) — e.g. 3 short cards: "No IT team required," "Setup in a day," "Pricing that scales with your team."

2.8 — Pricing Teaser

Three cards (₹399 / ₹649 / ₹799 per seat/month) + Enterprise "Custom" card, each listing 3-4 top features, linking to the full `/pricing` page — recommend the interactive seat-slider pattern here too (see Part 4).

2.9 — Final CTA Banner

Simple centered band: `Start Free Trial` + `Book a Demo`, no-CC reassurance text.

2.10 — Footer

Full mega-footer (Hubstaff pattern): Product links, Solutions links, Resources, Company, Legal — with the **4-color pink/yellow/green/blue brand bar** as the top border of the footer, carrying your signature brand device all the way to the bottom of the page.

PART 3 — Full Click-Path / Navigation Map

This traces exactly how a visitor moves through the site, redirect by redirect — mirroring the depth of analysis done for Hubstaff/Teramind.

```
Homepage
 |
 ├─ Click "Dashboard" tab in hero tab-strip
 |    → swaps hero screenshot in place (no page navigation)
 |
 ├─ Click any Product Tour section image/CTA (e.g. "See Reports in action")
 |    → /product/reports
 |         |
 |         ├─ Click "Work Pulse" report tile (numbered 01 in your deck)
 |         |    → expands inline to show heatmap + insights (matches your
deck's tile-switch UI)
 |         ├─ Click "Burnout & Wellbeing" tile (02)
 |         |    → swaps inline to Burnout report view
 |         ├─ ...same pattern for Focus Score / Tool Intelligence /
Attendance / Team Leaderboard
 |         └─ Click "See full product tour"
 |              → /product (overview page, all 6 modules summarized with
links back to each)
 |
 ├─ Click "Pricing" in top nav
 |    → /pricing
 |         |
 |         ├─ Adjust seat-count slider
 |         |    → recalculates all 3 plan totals live (no navigation)
 |         ├─ Toggle Monthly/Yearly
 |         |    → recalculates totals + shows "Save X%" badge
 |         ├─ Click "Compare all features"
 |         |    → expands full feature-comparison matrix inline (Teramind's
6-category grouping pattern)
 |         └─ Click "Talk to Sales" on Enterprise card
 |              → /contact (pre-filled "Enterprise inquiry" context)
 |
 ├─ Click "Why SoniQ" in top nav
 |    → /compare (hub page listing all 3 comparisons)
 |         └─ Click "vs Hubstaff" card
 |              → /compare/hubstaff
 |                   → 16-feature comparison table + "Switch from Hubstaff"
CTA → /contact
 |
 ├─ Click "Solutions" mega-menu → "IT Services"
 |    → /solutions/it-services (industry-specific landing page: same template
as homepage
 |      Product Tour section, re-sequenced/re-worded for this industry's top
pain points)
 |
 └─ Click "Start Free Trial" (any instance, any page)
```

```
      → /signup (account creation form) → product app (account.soniq.io
equivalent)
```

Key principle carried over from both competitors: every click either (a) stays on the page and swaps content inline (tabs, sliders, expandable tiles — cheap to build, feels responsive), or (b) goes to a real destination page with its own hero and its own bottom CTA — never a dead-end or a placeholder. Every single node in this tree should be a real, built page before launch, not a "coming soon."

PART 4 — Interactive Component Specifications

Pricing seat-slider (Hubstaff + Teramind both use this — recommended for SoniQ)

- Seat counts: 5 / 10 / 25 / 50 / 100 / 250+ (adjust to your realistic Indian SMB customer range)
- Live-recalculates total monthly cost per plan as the slider moves
- Monthly/Yearly toggle with a "Save 15%" style badge

Product tour tab-swap (hero)

- 6 tabs matching your modules; clicking swaps the adjacent screenshot with a smooth crossfade (200–300ms), active tab gets the pill/dark-background treatment exactly as your product's own internal nav bar already does — this creates a nice self-referential consistency between marketing site and product UI.

Report tile switcher (on /product/reports)

- Directly reuses your deck's own numbered-tile UI (01–06) — clicking a tile swaps the report view inline, exactly replicating your actual product's Reports screen. This means your marketing site's interactive demo *is* a faithful mini-recreation of the real product — a strong "what you see is what you get" trust signal.

Screenshot gallery with privacy blur (on /product/screenshots)

- Recreate the actual gallery grid with the "Blur: ON/OFF" toggle visible and functional (even if just visually toggling a blur filter on demo images) — letting a prospect **experience** the privacy control themselves before they're a customer is a meaningful differentiator none of your competitors' marketing sites offer.

PART 5 — What Makes SoniQ Visually Distinct From Both Benchmarks

Element	Hubstaff	Teramind	SoniQ (recommended)
Palette	Blue/teal, muted	Dark blue/red-alert tones	Pink/yellow/green/blue multi-accent — more energetic, less "enterprise-grey" than either
Hero visual	Flat product screenshot	Layered/stacked screenshots	Animated 3D shield icon (unique — neither competitor has a 3D brand mascot object)
AI framing	Absent	Named copilot ("Timmy")	"Auto-Generated Insights" — plain-language, embedded directly in reports rather than personified as a chatbot; quieter but more concretely useful framing
Trust signal	General compliance badges	General compliance badges	Interactive, triable privacy/blur + legal-consent gate — actually demonstrable, not just claimed
Brand device	None distinctive	None distinctive	The 4-color brand bar — a genuinely unique, ownable, repeatable visual signature across every page

---

A note on scope

This document deliberately leaves out investor-only material (funding ask, TAM/SAM/SOM, team bios, competitive fundraise positioning) per your instruction — those belong in the investor deck, not the public website. If you want a companion **content/copy doc** (full word-for-word page copy ready to hand to a developer) or a **clickable HTML prototype** of the homepage using this spec, I can build either next — just say which.
